mPDF

Floats inside kept-together blocks

Each dashed block below is kept together. The first has a floated column of text beside wrapped text and does not fit on this page, so it moves whole; the wrapped text keeps its indent on the next page.

Filler line 1, here to push the first block over the page boundary.

Filler line 2, here to push the first block over the page boundary.

Filler line 3, here to push the first block over the page boundary.

Filler line 4, here to push the first block over the page boundary.

Filler line 5, here to push the first block over the page boundary.

Filler line 6, here to push the first block over the page boundary.

Filler line 7, here to push the first block over the page boundary.

Filler line 8, here to push the first block over the page boundary.

Filler line 9, here to push the first block over the page boundary.

Filler line 10, here to push the first block over the page boundary.

Filler line 11, here to push the first block over the page boundary.

Filler line 12, here to push the first block over the page boundary.

Filler line 13, here to push the first block over the page boundary.

Filler line 14, here to push the first block over the page boundary.

Filler line 15, here to push the first block over the page boundary.

Filler line 16, here to push the first block over the page boundary.

Filler line 17, here to push the first block over the page boundary.

Filler line 18, here to push the first block over the page boundary.

Filler line 19, here to push the first block over the page boundary.

Filler line 20, here to push the first block over the page boundary.

Filler line 21, here to push the first block over the page boundary.

Filler line 22, here to push the first block over the page boundary.

Filler line 23, here to push the first block over the page boundary.

Filler line 24, here to push the first block over the page boundary.
