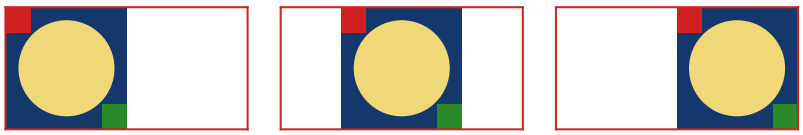
An SVG whose width and height are not the shape of its viewBox

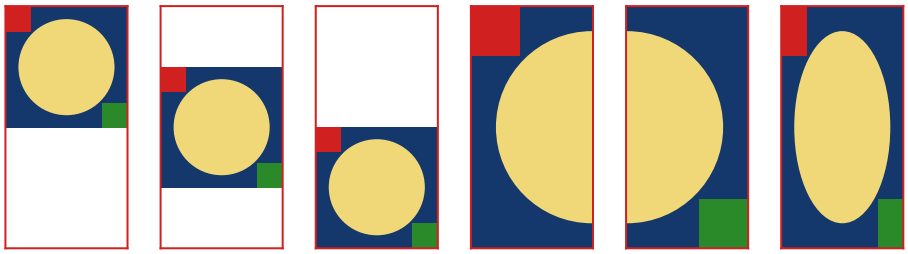
Each picture is a 10 by 10 viewBox - a blue square with a yellow circle, a red corner top left and a green one bottom right - in an image outlined in red. The image is the SVG's width and height, and the viewBox is fitted into it as preserveAspectRatio says.

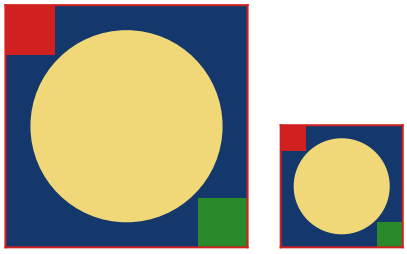
120 by 60, meet - xMinYMid, xMidYMid (the default), xMaxYMid



120 by 60, slice - xMidYMin, xMidYMid, xMidYMax; then none, stretched

60 by 120, meet - xMidYMin, xMidYMid, xMidYMax; slice - xMinYMid, xMaxYMid; then none





A width alone, 120, and a height alone, 60 - each a square, the viewBox's shape
