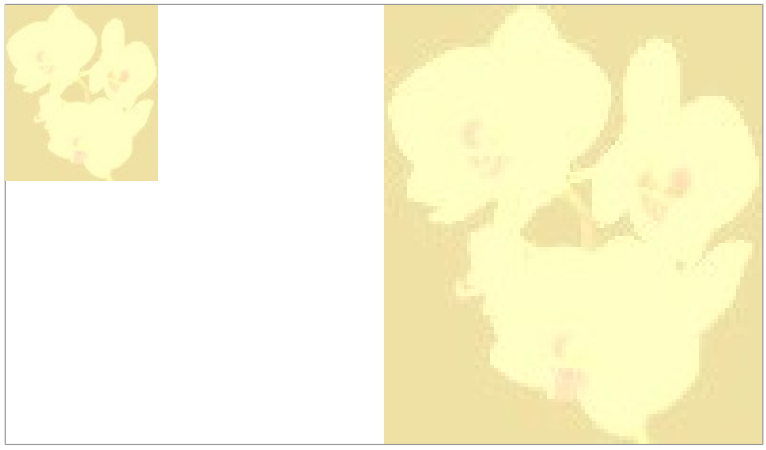
Block-level images narrowed to their line, and not moved by text-indent

A 60mm box holding a 50mm block image with margin-left: 20mm: the image is narrowed to the 40mm left, 20mm in from the left edge.

A 100mm box with a 20mm left float, then a 60mm block image with margin-left: 30mm: the image is narrowed to 50mm, 30mm in from the float, and keeps its proportions (taller than wide).



text-indent: 20mm, a block image first in the paragraph: the image is at the left edge of the box, not 20mm in; "after" below it is not indented either.

after

text-indent: 20mm, a block image with margin: 0 auto first in the paragraph: the image is centred in the box.

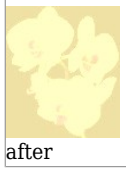
after

text-indent: 20mm in a right-to-left paragraph, a block image first in it: the image is at the right edge of the box.

after

text-indent: 20mm with text before the block image: "before" is indented 20mm, the image below it is at the left edge.

before



after
