TestEmoji-SVG: each emoji tests part of SVG, and may look unfinished

1 

Grinning face
A palette colour through var(), eyes drawn twice with use, and the mouth in currentColor, the colour of the text.

2 

Heart
One path using every path command. The arc and short lines squeezed in at the tip leave a notch at the bottom. A gradient fill and a half-transparent shine.

3 

Man
A radial gradient with an off-centre focus. The eyes are stroked in white, one at half opacity.

4 

Woman
Clipped by two rectangles 40 units apart, which leaves the white stripe down the middle. The eyes are a group at 80% opacity.

5 

Girl
An embedded 64-pixel PNG stretched to the em, so it looks pixelated.

6 

Regional indicator A
A reflected linear gradient, its stops' opacity taken from the style attribute.

7 

Regional indicator U
A repeated radial gradient, turned and squashed by gradientTransform.

8 

Black flag
A black shape with a dashed grey outline. Its text is not drawn, since a font may not use text, and a small square is hidden by a mask.

9 

Skin tone
The modifier on its own, a plain square, filled from the style attribute. A style element's rule turning it red is not applied.

10

Thumbs up
Drawn out of place and moved back by the document's viewBox.

11 

Family
Three faces drawn through use, taking a transform and colour from the group around them, in a document shared with the keycap.

12 

Flag of A and U
A blue square with a white stripe, from a gzipped document.

13 

Keycap 1
A frame whose even-odd fill leaves a hole, and the digit from the font's outline.

14 

Thumbs up, skin tone
Clipped to the top half of its bounding box, so the bottom half is missing on purpose. Its gradient takes its stops from another.

15 

Flag of England
No SVG document, so it is drawn from its plain outline, a black square.

Emoji 
 end

Text with emoji  in it. Text with emoji in it. Text with emoji  in it.
Text with emoji  in it.

Red text keeps its emoji in colour:
