mPDF

A backup font for a core font, on its first render

Each sample below is set in a PDF core font, whose windows-1252 encoding has no Cyrillic or Greek. That text is drawn in the backup font, DejaVu Sans, and the Latin text around it stays in the core font. Nothing of DejaVu Sans is in the font cache when the document is made, so this is the first time the backup font is used. No sample may draw a question mark in place of a Cyrillic or Greek letter.

Helvetica

Hello Привет, and Γειά σου

Times

Hello Привет, and Γειά σου

Courier

Hello Привет, and Γειά σου
