!important in @page rules

Written with cssMode set to legacy. Each panel fills its page area, so its edges are the page's margins.

Page 1, the first page and a right page. The plain @page rule's top and left margins of 30mm are important; @page :first gives them 10mm.

Standard: the panel starts 30mm from the top and the left, the important declarations beating :first. Legacy: 10mm from each, :first coming last. The right margin is 20mm in both.

Page 2, a left page. The side margins are mirrored, so the plain rule's important margin-left of 30mm is this page's right margin. @page :left gives both sides 50mm.

Standard: the panel ends 30mm from the right, the important margin beating :left. Legacy: 50mm. The left margin is 50mm in both. The top margin is 30mm in both.

Page 3, the first page of the named page appendix and a right page. The named page's margin-left of 10mm is important; its :first gives 50mm. Its :first's margin-top of 50mm is important too; the named page gives 15mm.

Standard: the panel starts 50mm from the top, the latest important declaration winning, and 10mm from the left, the named page's important margin beating its :first. Legacy: 50mm from each, :first coming last.

Page 4, the named page's left page. Its important margin-left of 10mm is the right margin here. Its margin-top of 15mm is not important.

Standard: the panel starts 30mm from the top, the plain rule's important margin beating the named page's. Legacy: 15mm, the named page coming last. The left margin is 50mm and the right 10mm in both.
