Khmer Coeng clusters

A Coeng subscripts the consonant after it, and a Coeng and a Ro together are drawn in front of the consonant they were written after. Both belong to one cluster: a Coeng that ends its cluster subscripts nothing and moves nowhere, whatever the next cluster begins with. Every sample below is written left to right in the order it is listed.

KA, five Coeng groups, RO - the KA first, the trailing Coeng where it was written

ក្ក្ក្ក្ក្រ

KA, five Coeng groups - the same run without the RO after it

ក្ក្ក្ក្ក

KA, Coeng, RO - one cluster, so the pair is drawn in front of the KA

ក្រ

Coeng alone - a Coeng with nothing after it, on its dotted circle

Khmer for "Khmer language", whose Coeng sits inside its cluster
