# :not(), :is() and :where() in real stylesheets

## Components

In the first card, the opening paragraph is bold and the link in the second list item is pink and bold. In each list, the odd items are blue unless muted. The plain card's opening paragraph is not bold. The filled button is white on blue, the outline button blue with a border. The badge and the loud tag are white on purple; the quiet tag is not.

**Opening paragraph, bold.**

- First item, blue
- Second item with **a pink link**
- Third item, muted
- Fourth item
- Fifth item, blue

1. One, blue
2. Two
3. Three, blue
4. Four

A plain card's opening paragraph.

Filled button Outline button **BADGE** **LOUD TAG** **QUIET TAG**

## A CMS article

The paragraph after each subheading is italic, unless it is a note. Links in paragraphs and list items are green, and the external one orange. Inline code is red on grey, and code in the pre block is not.

### A subheading

*Italic, with a green link and an orange one.*

### Another subheading

A note: not italic, with `inline code`.

- A green link in a list

```
code in a pre block
```

## An invoice

The quantity and amount columns are right-aligned, headings too. Even rows are shaded, unless void. The void row is grey after its first cell. The descriptions, which are neither the first cell nor a number, are grey.

| Item | Description | Qty | Amount |
|---|---|---|---|
| A-100 | Consulting | 4 | 480.00 |
| A-200 | Design | 2 | 190.00 |
| A-300 | Hosting | 12 | 102.00 |
| A-400 | Support | 1 | 60.00 |

## Competing rules

:is() and :not() weigh as their heaviest argument, :where() as nothing. Each paragraph says the colour it should be.

Orange: .pricing > p outweighs :where(#plans) > p, and comes after .pricing > p:where(.basic), which weighs the same.
Blue: .pricing > p:is(.pro, #enterprise) weighs as an id.
Green: .pricing > p:not(.pro, .basic) outweighs .pricing > p.
