Combining marks after a capital

DejaVu Sans has a capital form of some combining marks and not of others. The lowercase column is the mark as written; the capital column is the form drawn over a capital letter. Read down the second table: each mark should be its own, not the grave of the first row above.

The udatta sits above the letter and the anudatta below it. Both were given the bindi's adjustment instead - on the baseline, and to the left of where the bindi itself is drawn.
