Header row 3

tr, td and th:nth-child wherever the table is written

The page header's table is written apart from the flow, and counts its own rows: its second row is green on both pages.

td:nth-child(2) and th:nth-child(2) are green. A th counts among the cells of its row as a td does: the second cell of each row is green, whichever it is.

th 1	td 2	**th 3**
td 1	**th 2**	td 3

td:first-child is purple and td:nth-child(3) blue. mPDF's own tags written between the cells, such as a bookmark before the first cell, are not cells: A and D are purple, C and F blue.

A	B	C
D	E	F

tr:nth-child(even) is yellow. The rows are written with no tbody and no end tags: rows 2 and 4 are yellow.

Row 1	Row 1
Row 2	Row 2
Row 3	Row 3
Row 4	Row 4

Inside the outer table td:nth-child(3) is red, and the cells of tr:nth-child(2) are bold. The nested table counts its own rows and cells, and the outer table counts on after it: Outer 1c and Outer 2c are red, and none of the nested table's two columns is. Inner C, Inner D and the outer table's second row are bold.

Outer 1a	Inner A	Inner B	Outer 1c
	Inner C	**Inner D**	
Outer 2a	**Outer 2b**		**Outer 2c**

An absolutely positioned block at the foot of the page holds a table whose td:nth-child(2) is purple: Second is purple.

A page-break-inside: avoid block is laid out, found not to fit, and laid out again on the next page. In its table tr:nth-child(3) is blue: only Kept row 3.

First	Second	Third
