tr, td and th:nth-child in real stylesheets

A framework's striped table with row headers

The header cells are dark, the even ones a lighter grey. The first, third and fifth body rows are shaded grey, row headers included. The text of the third and sixth rows' cells is blue. The warning cell in row 5 is yellow: its rule weighs as much as the striping and comes after it. td:nth-child(n+3) right-aligns the amounts and the statuses, as the row header counts as the first cell.

#	Name	Amount	Status
1	Alpha	10.00	Open
2	Bravo	20.00	Open
3	Charlie, blue	30.00	Closed
4	Delta	40.00	Open
5	Echo	50.00	Warning, yellow
6	Foxtrot, blue	60.00	Closed

An invoice

The header is dark with the columns after the first right-aligned. The second and fourth item rows are shaded, and the item names bold. In the totals, each amount is the second cell of its row, after a label spanning three columns, and is bold and green. A heavy rule sits above the first total.

Item	Quantity	Price	Amount
Consulting	4	120.00	480.00
Design	2	95.00	190.00
Hosting	12	8.50	102.00
Support	1	60.00	60.00
		Subtotal	**832.00**
		Tax	**83.20**
		Total	**915.20**

Competing rules

td.muted weighs as much as td:nth-child(2) and comes after it, so every muted cell is grey, and only the second cell that is not muted is green. The second row is shaded green, but its first cell is red: the rule naming the table's id outweighs the row's.

Grey	Grey	Black
Red background	Grey	Grey
Black	Green	Grey

A long striped table with its header repeated

The rows run onto the next page, where the header is repeated. The odd rows are shaded and every third row's cells are blue on both pages, counted from the first body row whatever page it falls on.
