What the measuring pass of a kept block lays out

A block kept together that fits where it is, is laid out by the pass that measured it. So that pass has to lay it out as the block would be without the property. Each shape below appears twice, plain and then kept, and the two must match.

The plain card has a colour and a picture behind it. This section inside it has a border and no background of its own, so the picture shows through it.

The plain heading, kept with its table

With keep-with-table on, the heading is held back until the table starts.
Its background is painted with it then, by a different path from a plain heading's.

With keep-with-table on, the heading is held back until the table starts.
Its background is painted with it then, by a different path from a plain heading's.

Filler line 1, so that the last block starts past the middle of the page.

Filler line 2, so that the last block starts past the middle of the page.

Kept line 1. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 2. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 3. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 4. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 5. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 6. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 7. Every row of the table below keeps with the one before it, so the table cannot split.
Kept line 8. Every row of the table below keeps with the one before it, so the table cannot split.
