# Shorthands reset the longhands they do not name

## border after a border-top-color

border-top-color: #cc0000, then border: 1mm solid #0000cc in a later rule. All four sides blue.

An inline element, with a 0.5mm border. All four sides blue.

Some words in a line.

A table cell. All four sides blue.

## border-top-color after a border

border: 1mm solid #0000cc; border-top-color: #cc0000. The top red, the other sides blue.

A table cell, the colour in a later rule. The top red, the other sides blue.

## border keeps border-radius

border-radius: 4mm, then border: 1mm solid #0000cc in a later rule. A blue border with round corners.

### background after its longhands

background-repeat: no-repeat; background-position: right bottom; background-size: 25%, then background: url(bg.jpg) in a later rule. The image at its natural size, tiled from the top left over the whole box.

A table cell, with the repeat and position in the earlier rule. The image tiled from the top left.

### background longhands after a background

background: #ccccff url(bg.jpg); background-repeat: no-repeat; background-position: right bottom. The image once, in the bottom right corner of a light blue box.

### background keeps mPDF's own background properties

background-image-resize: 6; background: url(bg.jpg) no-repeat. The image stretched to fill the box.
