mPDF

Characters above U+1FFFF go to Sun-ExtB only where it has them

The page is set in DejaVu Sans, which has none of the characters below. Sun-ExtB is the SIP font and Sun-ExtA the backup font. Sun-ExtB has CJK Extensions B to D and the compatibility supplement; no font here has Extension E.

U+20BB7, Extension B: in Sun-ExtB

Between the brackets is a form of 吉 with a longer lower stroke.

[𠮷]

U+2B820, Extension E: left in DejaVu Sans

Between the brackets is DejaVu Sans's missing-character box: a tall rectangle.

[□]

U+20BB7 then U+2B820: split between Sun-ExtB and DejaVu Sans

Between the brackets are the form of 吉 in Sun-ExtB, then the same rectangle as above.

[𠮷□]

The same in a Sun-ExtA paragraph: split between Sun-ExtB and Sun-ExtA

Sun-ExtA names Sun-ExtB as its sip-ext font. Between the brackets are the form of 吉 in Sun-ExtB, then a blank space: Sun-ExtA's missing-character glyph is empty.
