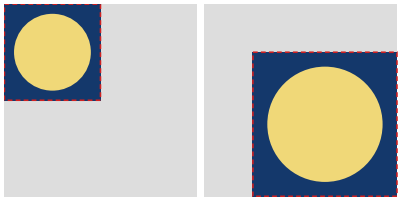
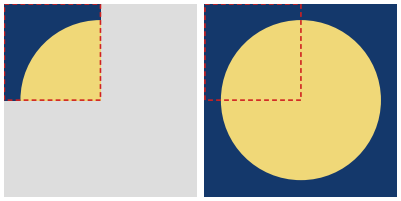
An <svg> inside an SVG

A nested <svg> sets up a viewport of its own: moved by x and y, clipped to its width and height, with its viewBox fitted into it. Each picture is 120px square on grey, and the nested viewport is outlined with red dashes.

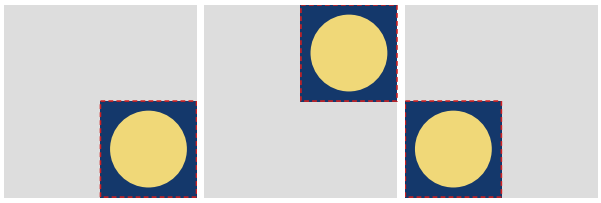
viewBox scaling - a 10 by 10 viewBox in a 60px viewport, top left; then the same at x="30" y="30" with width and height of 75%



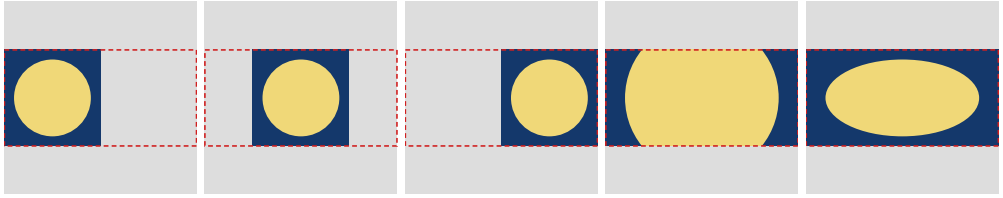
Clipping without a viewBox - a 120px picture in a 60px viewport shows its top left quarter; with overflow="visible" it is all drawn

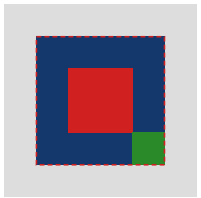


x and y offset - x="60" y="60", x="60" y="0", and x="0" y="60", each 60px square



preserveAspectRatio in a 120 by 60 viewport at y="30" - xMinYMid meet, xMidYMid meet (the default), xMaxYMid meet, xMidYMid slice, none





Two levels of nesting - a viewport at 20,20 with an 8 by 8 viewBox; inside it a 4 by 4 viewport at 2,2 holding a 20 by 20 red square, clipped to 4 by 4; a green square after the inner <svg> is drawn in the outer viewport again
