The universal selector

*

Text no other rule colours is navy: * reaches every element, and every other rule on this page outweighs it. The captions stay grey and the headings black, from their own rules.

A paragraph

- A list item

*.hl

The paragraph and the span with class hl are red and bold. The paragraph without it stays navy.

With the class

Without the class, **a span with it**

*#pick

Only the paragraph with id pick has a yellow background.

With the id

Without the id

*[title]

The paragraph and the item with a title are green and bold; the others stay navy.

With a title

Without a title

- **An item with a title**
- An item without

div.inside *

Everything inside the box is red: the paragraph, the span in it and the list item. The paragraph after the box stays navy.

A paragraph with a span

- A list item

After the box

div.deep * em

The emphasis inside the paragraph is red and bold. The one written straight into the box has no element between it and the box, and stays navy.

Straight in the box

In a paragraph, ***emphasised***

div.children > *

The box's two children have a red bar on their left. The span inside the paragraph does not.

A child with a span in it

Another child

div.after * + p

The paragraphs after another element are red and bold. The first paragraph stays navy.

The first paragraph

After a paragraph

A heading

After the heading

div.later h4 ~ *

Everything after the heading is red. The paragraph before it and the heading stay navy.

Before the heading
The heading
After the heading
After that

div.is > :is(*):first-child

The box's first child is red. The second stays navy.

The first child
The second child

div.never p:not(*)

Every element is an element, so :not(*) matches nothing: the paragraph stays navy.

A paragraph

table.first tr > *:first-child

The first cell of each row is yellow, whether it is a header or a data cell.

Head	Head 2
R1 C1	R1 C2

ul.rest > * + *

Every item but the first is red and bold.

- First
- **Second**
- **Third**
