The Garuda paragraph below is rendered with the font cache empty for Garuda, Sun-ExtB and DejaVu Sans Condensed. The CJK Extension B character U+20000 is set in Sun-ExtB (backupSIPFont), and the characters after it that Garuda lacks are still substituted: the double arrow U+21D2 from the core Symbol font, and a-macron U+0101 from DejaVu Sans Condensed (backupSubsFont). Before the fix, all three were missing glyphs.
