Angle brackets and quotes inside attribute values, autoScriptToLang off

In a style

A ">" in a double-quoted font name: the next line is blue.

Blue text

A ">" in a single-quoted style: the next line is red.

Red text

A "<" and a ">" in a style on a span: "red" in the next line is red and bold, the rest black.

Before **red** after

A ">" in the style of a table cell: one cell with a yellow background, reading "Cell".

Cell

In other attributes

A ">" in a title before the style: the next line is blue.

Blue text

A "<" in a title before the style: the next line is green.

Green text

A ">" and a "<" in the value of a text field: both boxes read "a > b < c".

a > b < c and, escaped, a > b < c

An unknown tag with a ">" in its attributes is dropped whole: the next line reads "before inside after" and nothing else.

before inside after

Quotes that do not open a value

An unquoted title with an apostrophe: the next line is blue, and the line after it is drawn.

Blue text
The line after

A stray quote after an unquoted value: "bold" is bold, "italic" italic and "underlined" underlined.

bold, *italic* and "underlined"

The document goes on after them: this caption and the next line are drawn.

The end
