The CSS-wide keywords

color: inherit, unset and revert on a paragraph in a green box: all three lines are green.

inherit
unset
revert, with no built-in colour for a paragraph

color: initial on an emphasis in a green box: "initial" is black.

Green text *initial* and green again

font-size and font-weight: inherit: the line is as large and bold as the box's text.

inherit

font: initial: the line is in the document's default font and size, 9pt, and not bold. It stays red, as font does not set the colour.

font: initial

border: inherit: the line has the box's solid green border, not a dashed red one.

border: inherit

border-top-color: inherit: the line's dashed border is green along the top and red on the other sides.

border-top-color: inherit

padding: inherit: the line's text sits 1.5mm inside its dashed red border.

padding: inherit

background: inherit: the line's background is the box's pale green, not white.

background: inherit

border and background-color: unset, which are not inherited, so take their initial values: no border, and the box's pale green shows through.

unset

list-style: inherit on the items of a list with square markers inside: both items have square markers inside the box.

- first item
- second item

margin: revert on the second list, after a rule that sets every list's margin to 0: the second list has the built-in space above and below it, the first none.

- A list with no margin
- A list with its built-in margin

Text after the lists.

font-size: revert on the second heading, after a rule that makes headings small: the second heading is its built-in size.

A small heading

A heading at its built-in size

A table with green text on pale yellow, whose row is pale green. The first cell's colour is inherited from the table: green. The second cell's background is inherited from its row: pale green, not the table's yellow. The third cell's padding reverts to the thin built-in padding. The header cell's weight reverts to bold.

color: inherit	background-color: inherit	padding: revert	**font-weight: revert**
