A framework's stylesheet

Written with cssMode set to standard. No text on the page is red.

Alert

Dark green bold text on light green, with a small blue square from a JPEG data URI at its left, and a border. The rule after the close button's content string applies.

A saved record, from a data URI icon

Quotation and breadcrumb

The quotation is grey and italic with a grey rule at its left, and the breadcrumb items are blue: rules after strings with braces, semicolons and escapes.

> *A quotation, with its marks set in the stylesheet.*

Home Library Data

Code

Pink, in a monospace font: the font names with a semicolon and braces in them are skipped for the next in the list.

Call `render()`, or set `font-mono` on any element.

Card

A bordered card with a blue title, not white on black: the dark theme selectors, with a brace and a semicolon in their strings, match nothing here.

Card title

Muted text in the card.

Utilities in nested @media and @supports

An A4 page is about 794px wide, so the min-width: 640px block applies and the min-width: 1024px block does not. Standard: the line marked sm:hidden is not shown, the line marked lg:hidden is; sm:text-end is right-aligned; print:bg-warning has a pale yellow background and md:w-1/2 is half the width. Legacy: escaped class names such as .sm\:hidden match nothing, so those lines are all shown, plain and left-aligned. In both, the fallback in @supports not is black, and the last line is centred and bold.

lg:hidden, which is shown

sm:text-end

print:bg-warning md:w-1/2

grid-fallback

text-center fw-bold, not underlined
