!important

.class !important beats #id: the line is green.

An important class against an id

.class !important beats the inline style: the line is green.

An important class against the inline style

An inline !important beats #id !important: the line is green.

An important inline style against an important id

An !important declaration beats one written after it in the same block: the line is green.

An important declaration against a later one

Of two !important rules, .class.class beats p.class: the line is green.

Two important rules of different specificity

Of two !important rules as specific, the one written later wins, and a plain rule after both does not: the line is green.

Two important rules as specific

An !important rule inside @media print beats #id, and one inside @media screen is left out: the line is green.

An important rule inside @media

The flag in capitals, spaced from the bang, still counts: the line is green.

! IMPORTANT

border: ... !important expands into sides that are all important: a solid green border of even width on every side, no red, no dots.

An important border shorthand

background: ... !important beats #id's background-color: a pale green background.

An important background shorthand

font: 13pt serif !important sets the size over #id's 7pt, and resets its bold: the line is large, serif and not bold.

An important font shorthand

td.class !important beats td#id on a collapsed border: the middle cell has a thick green border, drawn over its neighbours' thin red ones.

Left	Middle	Right

The default stylesheet's p.ua { color: green !important } beats the document's p.ua !important and an inline !important: the line is green.

An important rule of the default stylesheet
