Presentational attributes

<hr color> beats the grey of the built-in defaults: the rule is green.

<hr width="50%"> beats the full width of the built-in defaults: the rule is half as wide as the box, and centred.

<hr align="left"> puts a half-width rule at the left of the box.

<hr size="6"> draws the rule 6px thick.

<font color> colours its text: "font" is green.

font and text around it

A span, a paragraph and a link have no color attribute: "span" and "paragraph" are black, and the link is blue.

span and a link
paragraph

<p align="right"> puts its text at the right.

Aligned right

A stylesheet rule beats <p align="right">: the text is at the left.

A rule against the attribute

 centres the paragraphs in it.

A paragraph in a centred div

<td align> and <td valign> place the text of a cell: "right" at the bottom right; a rule beats the align of "ruled", which is at the left.

right	ruled

<td nowrap> keeps a narrow cell's text on one line.

one line of text

<td bgcolor> fills the cell: the cell is green.

<table border="1"> draws a thin black border around the table and each cell, and a rule for the table's border beats it: the outer border is thick and green, the cells' thin and black.

plain	plain
ruled	ruled

<table border="3"> draws a 3px border around the table.

three pixels

<caption align="bottom"> puts the caption below its table.

The table

The caption

<li type="square"> beats the disc the item inherits from its list: the first marker is a square, the second a disc.

- A square
- A disc

<img vspace hspace> beats the image's default margin of 0: the image stands 20px clear of the text on each side.

before after

<img align="right"> floats the image to the right, and the text flows at its left.

Text beside the image.

<img border="3"> draws a 3px black border around the image.
