Tai Tham clusters joined by a Sakot

A Sakot subscripts the consonant after it, and the two are drawn as one glyph the font substitutes for the pair. Written with no consonant in front of them they are a broken cluster, and the font has no dotted circle to stand in for the consonant that is missing. Read the subscript form under each: the broken cluster draws the same one the well-formed cluster does.

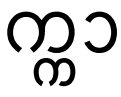
Sakot, High Ka - no base, so nothing carries the pair

High Ka, Sakot, High Ka - the same pair under a base, the form to match

High Ka alone - the base by itself

Sakot alone - nothing to subscript, drawn as it was written

Sakot, High Xa - the same rule one consonant over

Sakot, High Ka, Vowel Sign Aa - a vowel after the broken cluster


High Ka, Sakot, High Ka, Vowel Sign Aa - the same vowel after the base
