At-rules other than @media

Statement at-rules

@charset, @namespace, @import and an @layer statement start the style sheet. The paragraph is green and bold.

After the statement at-rules

Block at-rules mPDF does not use

@keyframes, @container and @font-feature-values are removed whole, and the @page rule's margin box is drawn as the page's header: "Header" centred at the top of the page. Each paragraph is green and bold; none is red.

After @keyframes

After @container

After @font-feature-values

After @page with a margin box

@supports and @layer

Their rules are unwrapped: the first and third paragraphs are blue and italic, the second and fourth green and bold.

Inside @supports

After @supports

Inside @layer

After @layer

@supports not

The fallback for engines without the feature is dropped: the first paragraph is black at the normal size, the second green and bold.

Inside @supports not

After @supports not

@media inside @supports

The print block applies and the screen block does not: the first paragraph has a yellow background, the second is black at the normal size, the third green and bold.

After @supports

A brace inside a string

Braces in quoted strings do not end the block: the first paragraph is blue and italic, the second green and bold.
