mPDF

Backup fonts chosen from their character ranges

The page is set in Helvetica, a PDF core font. The backup fonts are, in order, DejaVu Sans Condensed, FreeSans, Garuda and Sun-ExtA. Only Sun-ExtA, Sun-ExtB and Garuda are on disk: which characters each backup font has is read from the ranges file mPDF ships for it, so DejaVu Sans Condensed and FreeSans are never opened. Each sample shows its script in the font named above it, with no question marks and no empty boxes.

Japanese, in Sun-ExtA

Tokyo: 東京へようこそ

Thai, in Garuda

Bangkok: ยินดีต้อนรับสู่กรุงเทพ

A Plane 2 character, in Sun-ExtB

This paragraph is set in Sun-ExtA, which hands Plane 2 to Sun-ExtB. The first character after the colon is U+20BB7, a form of 吉 with a longer lower stroke; the two after it are in Sun-ExtA.

U+20BB7: 吉野家
